

ALP ATAMER

alpatamer@gmail.com | +44 7832 954 393 | UK Work Permit Holder | Greater London
alpatamer.dev | linkedin.com/in/alpatamer | github.com/alpatamerr

SUMMARY

MSc Computer Science graduate and AI Product Engineer at an early-stage startup, building LLM-powered recruiting workflows in Python, TypeScript, and React. Previously shipped data pipelines and customer-facing features at a US legal-tech company, and built a live real-time operations prototype on Palantir Foundry. Eligible to work in the UK with a valid work permit.

EDUCATION

MSc in Computer Science | University of Birmingham | Sep 2024 – Sep 2025

BA in International Relations | Bilkent University | Sep 2018 – Sep 2024

EXPERIENCE

AI Product Engineer – Cruvo | London, UK | Jul 2026 – Present

- Work directly with customers and the founder to translate hiring challenges into product decisions, owning features end-to-end from research and design through production rollout and iteration based on customer feedback.
- Develop AI-powered recruiting workflows that research, source, enrich, evaluate, and rank candidates against hiring briefs using Python, FastAPI, Next.js, React, and PostgreSQL with pgvector.
- Improve the reliability, performance, and cost-efficiency of LLM-driven workflows through failure analysis and output evaluation, while building integrations with ATS platforms and third-party data providers.

Software Engineer – Draftwise | Remote, New York, USA | May 2024 – Sep 2024

- Built Python data pipelines integrating the HubSpot and DocuSign APIs, using AWS S3 for automated data processing and storage.
- Developed React and TypeScript dashboard features, implementing PostgreSQL constraints to prevent duplicate records and improve data integrity.
- Investigated and resolved L3 production issues through root cause analysis, shipping Python backend fixes via code review and CI/CD.
- Partnered with customer-facing teams and PM to scope technical integrations, wrote technical documentation, and contributed to onboarding sessions helping enterprise customers adopt the platform.

Research Assistant Data Analyst – Bilkent University | Ankara, Turkey | Sep 2022 – Jun 2023

- Built simulation models in AnyLogic across 3 international logistics scenarios in a research partnership with Aselsan, identifying process bottlenecks and operational inefficiencies.
- Analyzed logistics datasets of 1,000+ records with Python and SQL, and delivered 2 technical presentations of optimization models to academic, industrial, and external stakeholders to drive alignment.

International Relations Intern – Ministry of Foreign Affairs of Turkey | Ankara, Turkey | Jun 2022 – Jul 2022

- Built an internal web platform in HTML, CSS, and JavaScript improving access to 50+ departmental resources, and synthesized daily geopolitical reporting into executive summaries for senior officials.

PROJECTS

Crisis Logistics Command System | Independent Project | github.com/alpatamerr/crisis-logistics-command-system | Jan 2026 – Jul 2026

- Built and deployed a live crisis-response prototype on Palantir Foundry to pitch for contract work, giving West London operations teams real-time situational awareness across incidents, transport networks, and airborne assets through 21 automated Python/PySpark data pipelines.
- Turned raw city data into operational decisions with PySpark analytics, including anomaly alerts when incidents spike above trend, peak-hour disruption forecasts, and geographic hotspot scoring to guide resource allocation.
- Designed the product around 4 operational personas, from dispatchers to shift supervisors, with role-based views, incident response workflows to acknowledge, reroute, or escalate, and a full audit trail.

AI-Personalized Running Coach | MSc Dissertation | github.com/alpatamerr/ai-personalized-running-coach | May 2025 – Sep 2025

- Developed a full-stack AI coach that ingests 10,000+ activity data points from the Strava API, models them in PostgreSQL, and turns them into personalized 16-week training plans delivered through a goal-setting wizard covering 5K to marathon goals and an adaptive training calendar built in React.
- Segmented runners into 10 performance profiles with K-means clustering on cadence, pace, and heart rate, exporting the trained model for real-time inference in the Node.js backend.
- Engineered a constrained LLM workflow on the OpenAI API with schema-enforced JSON output, training-science guardrails such as weekly mileage caps and deload weeks, and cluster-aware prompts that regenerate plans from each runner's recent activity.

SKILLS

Languages: Python, TypeScript, JavaScript, SQL, Bash

Frameworks & Libraries: FastAPI, SQLAlchemy, Next.js, React, PySpark, Polars, Node.js, Express.js, Leaflet, BlueprintJS

Cloud & Tools: AWS (S3, RDS), Railway, Vercel, Docker, Claude Code, Palantir Foundry, GitHub Actions, PostgreSQL (pgvector)

API & Data: OpenAI API, REST APIs, Webhooks, Data Pipelines, HubSpot API, DocuSign API, Strava API

ACTIVITIES & CERTIFICATIONS

- Codecademy Full-Stack Engineer Certificate | Aug 2024
- Participated in security-focused hackathons and technical workshops at the University of Birmingham.
- Coordinated international conferences at Bilkent University, leading a team of 5 across event logistics and speaker relations.
- Languages: English (Full Professional Proficiency) | Turkish (Native).
