Summary

Recent MSc Computer Science graduate who transitioned from International Relations after discovering a passion for software development through technical business analysis work. Specialized in full-stack development (React, Node.js, Python, PostgreSQL) with proven ability to build production-ready applications integrating AI/ML and third-party APIs. Eligible to work in the UK with a valid work permit.

Education

MSc Computer Science University of Birmingham – Birmingham, United Kingdom	Sep 2024 – Sep 2025
BA International Relations Bilkent University – Ankara, Turkey	Sep 2018 – Aug 2024

Experience

Software Engineer, Draftwise – Remote, New York, USA Enhanced Draftwise’s AI-powered legal tech platform by building automated workflows in Python, improving frontend components in React, and helping to improve product and user experience. - Contributed to Python scripts for extracting and cleaning HubSpot CRM data into PostgreSQL, helping reduce manual errors and improve data consistency. - Assisted in building React dashboard components to display contract and sales pipeline data, including tables that update when new data is fetched. - Developed reusable React components, including collapsible contract panels and simple interactive charts, improving dashboard usability. - Supported frontend performance improvements by applying lazy loading, memoization, and basic asset optimization to speed up page load times. - Worked with PM and engineering team to turn requirements into accessible dashboards and reports, gaining practical experience in translating business needs into software solutions.	May 2024 – Sep 2024
Research Assistant, Computational Logistics & Data Analysis, Bilkent University – Ankara, Turkey Served as a research assistant focusing on computational modeling and quantitative analysis in supply chain and logistics. - Developed computational simulation models using AnyLogic software to optimize international logistics scenarios, analyzing data patterns to identify cost-reduction opportunities. - Performed quantitative data analysis on supply chain workflows, applying statistical methods and optimization algorithms to improve operational efficiency.	Sep 2022 – Jun 2023
International Relations Specialist Intern, Ministry of Foreign Affairs of Turkey – Ankara, Turkey Focused on leveraging technology and digital tools to enhance information management and workflow efficiency within the Ministry during the internship period. - Compiled and analyzed geopolitical news data to create a daily digital newsletter. - Developed an internal website using HTML, CSS, and basic JavaScript, improving accessibility to key resources.	June 2022 – July 2022

Projects

AI-Personalized Running Coach MSc Dissertation Project – Project Link <i>Technologies used: React, Python, Node.js, Express.js, PostgreSQL, REST API</i> - Developed full-stack fitness app integrating Strava API with backend services to manage authentication, run history, and generate adaptive 16-week training plans. - Implemented machine learning algorithm using K-means clustering on users' last 10 runs to establish personalized running profile and tailor training schedules. - Integrated OpenAI GPT into a responsive React interface, delivering contextual coaching advice and personalized workout recommendations.	
Weather Tracker Personal Project – Project Link <i>Technologies used: React, Flask, Python</i> - Developed real-time weather application with location-based forecasting and multi-city comparison features. - Implemented API integration with OpenWeatherMap and responsive design for mobile/desktop use.	
Custom Music Playlist Maker Personal Project – Project Link <i>Technologies used: React, Node.js</i> Built music discovery application integrating Deezer API for searching 30M+ tracks. Implemented drag-and-drop playlist interface with React hooks.	

Skills

Languages: Python, JavaScript, TypeScript, SQL, Bash	Web Development: React, Next.js, Node.js, Express.js, Flask, HTML, CSS, Redux
Tools: Git/GitHub, Docker, Asana, Jest, MS Office	Database: PostgreSQL

Extracurricular Activities

Member – University of Birmingham Computer Science Club - Participated in club activities, including coding workshops to gain hands-on experience with Git for version control and pair programming. - Joined 2 hackathons, focusing on coding challenges and security, which fueled my transition to Computer Science. - Learned Bash to automate repetitive terminal tasks to ease system management.	Sep 2024 – Aug 2025
Event Organizer – International Relations Society at Bilkent University - Led a team of 5 to coordinate "Diplomacy Days" and "NGO Days" conferences, focusing on global issues and diplomatic solutions, involving discussions with experts, NGOs, and diplomats. Collaborated with other team members to set strategic goals, plan event logistics, and ensure successful execution. - Organized an international conference - Middle East Forum focusing on Middle Eastern politics discussions. Managed all logistical aspects, including vendor coordination, scheduling, budget oversight, and event execution, to ensure smooth day to day operations.	Sep 2021 – June 2022
Latin Dance Club Leader – Bilkent University Ballroom Dance Club Led the Latin Dance Club, organized practice sessions, workshops, and performances.	Sep 2018 – Aug 2021

Certifications & Awards

• Codecademy Full-Stack Engineer Certificate – Codecademy, Aug 2024

Languages

- English – Full professional proficiency
- Turkish – Native
